DETAILED ACTION

Applicant's election without traverse of Group I invention (claims 1-13 and 22-36) in the reply filed on October 05, 2004 is acknowledged. However the Restriction Requirement mailed September 07, 2004 is hereby withdrawn. A new Restriction Requirement follows.

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-13, drawn to a method, classified in class 365, subclass 113.
- II. Claims 14-21, drawn to an apparatus, classified in class 365, subclass 163.
- III. Claims 22-29, drawn to a machine-readable medium, classified in class 711, subclass 215.
- IV. Claims 30-36, drawn to an electrically-programmable phase change memory device, classified in class 365, subclass 225.7.

The inventions are distinct, each from the other because of the following reasons:

Inventions of Group I and Group II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case, the method as claimed in the invention of Group I can be practiced with another materially different product, such as optically preprogramming another known phase change memory, other than the phase change memory system recited in Group II invention.

Inventions of Group I and Group III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of

Application/Control Number: 10/043,993

Art Unit: 2824

operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions recite divergent subject matters; ie. Group I claims a method for optically preprogramming a phase change memory device, while on the other hand, Group III defines a machine-readable medium including machine-executable instructions.

Inventions of Group I and Group IV are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention of Group IV has separate utility such as an electrically-programmable phase change memory device by itself. See MPEP § 806.05(d).

Inventions of Group II and Group III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions recite divergent subject matters; ie. Group II requires an apparatus comprising an energy source, a stage, and a controller, while in contrast, Group III is drawn to a machine-readable medium including machine-executable instructions.

Inventions of Group II and Group IV are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention of Group IV has separate utility such as an electrically-programmable phase change memory device by itself. See MPEP § 806.05(d).

Inventions of Group III and Group IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions recite divergent subject matters; ie. Group IV claims an

Application/Control Number: 10/043,993

Art Unit: 2824

electrically-programmable phase change memory device comprising a plurality of phase change memory cells, and a read/write circuit, while in contrast, Group III claims a machine-readable medium including machine-executable instructions.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Andrew Q. Tran whose telephone number is (571) 272-1885. The examiner can normally be reached on Mon - Fri 8:30 AM - 5:30 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Richard T. Elms can be reached on (571) 272-1869. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
